

SolarWinds Cloud-Connected Journey

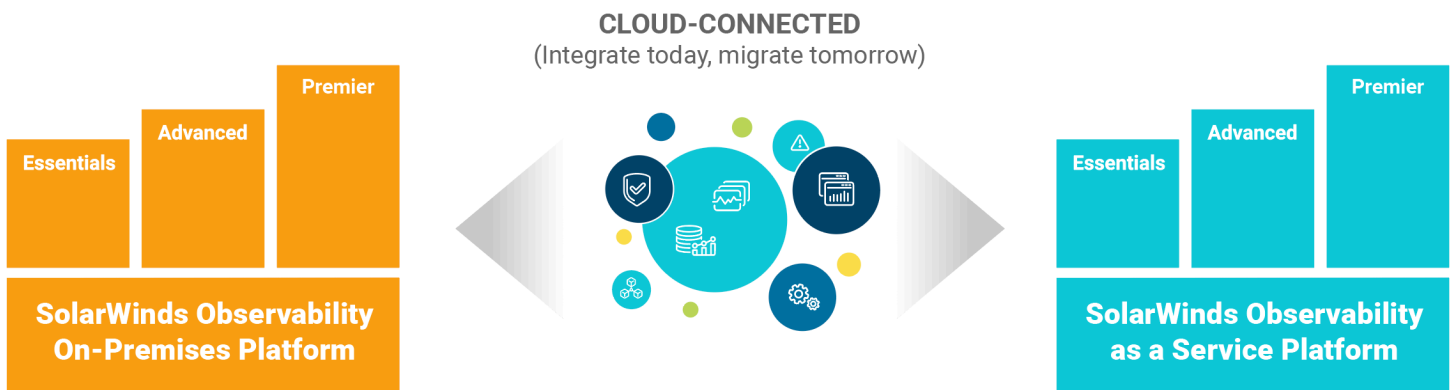

What is the Cloud-Connected Journey?

Cloud-Connected is a commitment from SolarWinds to help customers to monitor their environments during their transformation to hybrid or cloud, offering them greater overall visibility. Each customer's environment is different, and our goal is to meet the customer where they are today and foster their digital transformation journey.

Cloud-Connected functionality will give customers visibility into both the SolarWinds® Observability on-premises platform and the SolarWinds Observability as a Service (OaaS) platform, empowering customers to integrate today and evolve as their business needs dictate.

- **Integrate:** Customers can use the SolarWinds Observability and Observability as a Service products that best match their needs and still see a single, summarized view in the cloud.
- **Share:** Customers can push on-premises data from SolarWinds Observability or SolarWinds Orion® Platform modules into the OaaS cloud to fully mix and match data from all their products.
- **Evolve:** If and when the customer is ready to evolve completely to the cloud, they can turn off their on-premises products and continue monitoring with SolarWinds Observability as a Service.

The Journey to Full-Stack Observability

Centralized visibility and full-stack integration for hybrid environments
