SolarWinds® Identity Monitor lets you know when your employee's credentials appear in data breaches. This enables you to take action to protect your organization, preventing bad actors from accessing your systems and data.

A team of skilled researchers continuously collects credentials from data leaks from across the dark web, processes the data, and notifies if something associated with your monitored domains appear in a data breach.

IDENTITY MONITOR AT A GLANCE

- » Monitoring employee email addresses for exposure from data breaches
- » Past breach history with timeline and details
- » Employee private email address monitoring—for high-impact employees or board members
- » IP address monitoring (available from certain licensing tiers)

FEATURES

Email Domain Watchlist

Add one or more domains to the watchlist and get notified whenever associated credentials are found in a newly identified data breach.

Historic Exposure Check

Access to all identified historic records of credential exposure for your monitored domains.

Private Email Address Monitoring

With Identity Monitor you can add private email addresses to the watchlist, and you'll get notified of any compromise to prevent common phishing attacks, such as an urgent email from a key executive disrupting employee productivity.

Comprehensive Breach Database

Security researchers, who discover data breaches all around the clear web, deep web, and dark web, constantly add and process compromised credentials. The freshness and timeliness are a key advantage and distinction to similar products.

IP Address Monitoring

In addition to email domains, from certain subscription tiers, you can add an IPv4 Address or IPv4 Network CIDR to your watchlist to be monitored for exposure in botnets and breaches.

If an IP address is matched with a botnet, it might indicate an employee has active credential stealing malware on their computer. If a monitored IP address shows up in a breach, it's typically because the exposed data contains the last logon IP of a user.

More Than Credentials

Depending on the data breach, Identity Monitor can display more information. For example, the password encryption type (or lack thereof in case of plain-text leaked passwords), salt, account signup time, and personally identifiable information associated with the data breach.

Domain Verification

We use various methods to verify domain ownership, so only your organization can add a domain to the watchlist and access the breach history.

LICENSING

Identity monitor is a yearly subscription service. The subscription tiers are based on the number of employees in your organization, with higher tiers allowing more domains and IP address monitoring.

ABOUT SOLARWINDS

SolarWinds is a leading provider of powerful and affordable IT infrastructure management software. Our products give organizations worldwide, regardless of type, size or IT infrastructure complexity, the power to monitor and manage the performance of their IT environments, whether on-premises, in the cloud, or in hybrid models. We continuously engage with all types of technology professionals—IT operations professionals, DevOps professionals, and managed service providers (MSPs)—to understand the challenges they face maintaining high-performing and highly available IT infrastructures. The insights we gain from engaging with them, in places like our **THWACK®** online community, allow us to build products that solve well-understood IT management challenges in ways that technology professionals want them solved. This focus on the user and commitment to excellence in end-to-end hybrid IT performance management has established SolarWinds as a worldwide leader in network management software and MSP solutions.
