

Log Analyzer

Turn your log data into a powerful investigation and troubleshooting tool

SolarWinds® Log Analyzer is a powerful log management and analysis tool designed to fully integrate with the Orion® Platform and provide users with a mechanism to realize the potential of their log data. With real-time log collection, analysis, and visualization, you can gain out-of-the-box visibility into the performance and availability of your IT infrastructure.

LOG ANALYZER AT A GLANCE

- » Collect log data generated by your infrastructure to help you gain deeper insight when troubleshooting and performing forensic analysis of IT issues
- » Refine your log data via intuitive out-of-the box filters, and help you find relevant log entries instantly via a powerful search engine
- » Quickly visualize log volume, search results, and refine time frames via an interactive chart
- » Take action on critical events through the integrated Orion alerts
- » Integrate your log data directly into the Orion Platform console to easily view it alongside network and systems performance metrics

A SOLARWINDS PARTNER

SOLARWINDS LOG ANALYZER FEATURES

Event log collection and analysis

Your infrastructure is constantly generating log data to provide performance insight. Whether they're syslog, SNMP traps, Windows®, or VMware® events, they often can provide crucial bits of insight to help with troubleshooting. Collect, consolidate, and analyze log information with one tool to help you find the root cause faster.

Search and filter log data

Log data piles up fast, and it can be tricky to find the right bit of information. Log Analyzer helps you quickly perform searches and apply filters to refine your results. In addition, easily apply color-coded tags to your log data to aid with filtering, searching, and identifying performance issues.

Real-time log stream

Traditional log collection and management tools generate reports in plain text or HTML. With SolarWinds Log Analyzer, you can also see an [interactive real-time log stream](#). Ease troubleshooting by watching the log data to identify potential issues as they occur, and filter for particular keywords, like event IDs or error codes.

Orion intelligent alert actions

Be the first to know when issues arise. Log Analyzer integrates with the Orion Platform's intelligent alert engine to provide customizable alerts and delivery options, including email notifications, ServiceNow® integration, and the ability to trigger an external script.

Correlate log data with performance metrics

With SolarWinds PerfStack™, you are able to see log data on a common timeline with network and systems availability and performance metrics, providing an easy and quick way to visualize what events may have led up to an outage or slow down.

FREQUENTLY ASKED QUESTIONS

How is Log Analyzer licensed?

There's no need for complex volume calculations. Log Analyzer licensing is based on the number of devices generating log data, regardless of volume.

What log sources are supported by Log analyzer?

SolarWinds Log Analyzer currently supports syslog, SNMP traps, Windows®, and VMware® events. VMware events require a license for Virtualization Manager.

Where is my log data stored? How long is it stored for?

Data is stored in the Log Analyzer SQL database for seven days by default; however, this can be easily configured within the product settings.

What if Log Analyzer doesn't meet my needs?

Whether you are in IT ops, infrastructure, monitoring, or DevOps, SolarWinds has the right log monitoring and management tool for you.

Don't just take our word for it. At SolarWinds, we believe you should try our software before you buy. That's why we offer free trials that deliver full product functionality. Products can be downloaded from the SolarWinds website, and run on-premises in IaaS environments, or deployed in Microsoft® Azure® by the [Azure Marketplace](#).

ABOUT SOLARWINDS

SolarWinds (NYSE:SWI) is a leading provider of powerful and affordable IT management software. Our products give organizations worldwide—regardless of type, size, or complexity—the power to monitor and manage their IT services, infrastructures, and applications; whether on-premises, in the cloud, or via hybrid models. We continuously engage with technology professionals—IT service and operations professionals, DevOps professionals, and managed services providers (MSPs)—to understand the challenges they face in maintaining high-performing and highly available IT infrastructures and applications. The insights we gain from them, in places like our **THWACK** community, allow us to solve well-understood IT management challenges in the ways technology professionals want them solved. Our focus on the user and commitment to excellence in end-to-end hybrid IT management has established SolarWinds as a worldwide leader in solutions for network and IT service management, application performance, and managed services.
